150 TONNES OF CO₂

Congratulations on your contribution of DKK 37.500 to The Danish Climate Forest Fund. The contribution corresponds to 4.350 m² of new forest, which within 100 years will reduce Denmark's net emissions by 150 tonnes of CO₂. When we use nature's own solutions to capture CO₂, future generations will also benefit from more forests with new opportunities to experience nature. The forests protect water resources and drinking water, they give nature more space and create better conditions for biodiversity.

Together we can achieve Denmark's ambitious climate goals for CO₂ reduction under the UN Climate Convention (UNFCCC).
